

WIRELESS MTP

Our wireless MTP system allows you to provide MTP indication at remote locations around the track. This unit requires AC power only.

With an optional solar pannel and battery, we can even eliminate that requirement.

Data is received from the tote company so the MTP will match all other transmissions.

The LED displays are highly visible even in direct sunlight. Displays are available in the 7" or 15" versions.

Add as many as you like and Keep your operation running smoothly.

Add the optional spill light to warn of accidents or other hazzards.

Call us today for a quote.

The minutes to post operates automatically.

The spill light feature is controlled with this emergency switch typically located in the Judges room.
